3-MINUTE VIDEO WALKTHROUGH SCRIPT

Lesson 7 Final Project (Milestone 2) — Perpetual Bistro AI Virtual Waiter

Speaker (Voiceover): Christian Ezekiel L. Carvajal
Navigator (On-Screen Kiosk): John Miko P. Sarsalijo
Course & Section: BSCS 3112 — Artificial Intelligence (3rd Year)
Target Length: Strictly 3 Minutes (180s) | Word Count: ~400 words

TIME	MIKO'S SCREEN ACTION (WHAT TO CLICK)	CHRISTIAN'S SPOKEN LINES (WHAT TO SAY)
0:00 - 0:30 System Intro	1. Start on Home Landing (http://localhost:8000). 2. Hover Table #1 badge and Taglish button. 3. Click " ⚡ ORDER NOW" to enter Kiosk.	"Good day, Sir Rob! I am **Christian Carvajal**, and with me is **John Miko Sarsalijo**. Today, we are presenting our Milestone 2 Final Project: **Perpetual Bistro**, an autonomous AI virtual waiter and table ordering kiosk. Our entire application runs **100% locally on laptop edge hardware** using SQLite and a local Qwen 2.5 language model. It requires zero cloud APIs, keeping all student dining data secure and fully functional offline."
0:30 - 1:00 Menu & Filters	1. Click category pills: "Burgers", "Pastas", "Combos". 2. Toggle "Dairy-Free" or "Gluten-Free" dietary filter. 3. Point cursor to allergen warning badges on dishes.	"On the kiosk surface, customers can explore twenty-one authentic Perpetual Bistro dishes across six categories. Each dish pulls directly from our relational SQLite database, complete with live inventory counts and allergen profiles. Students can filter instantly by category or apply dietary filters like gluten-free or dairy-free, ensuring safe choices for anyone with campus food allergies."
1:00 - 1:35 Cart & Custom	1. Click "+ Add" on Perpetual Classic Burger. 2. Hit the "+" button in cart to increase qty to 2. 3. Click " ⚙️ " on Truffle Mushroom Pasta, check "Extra Cheese", and click "Add to Order".	"Next, let us place an order. Miko adds our best-selling **Perpetual Classic Burger** to the tab and increments the quantity to two. Notice the subtotal and VAT update in real time. Customers can also personalize their meal. Clicking the gear button opens chef instructions. Miko adds **Truffle Mushroom Pasta** with extra cheese. The kitchen instructions bind cleanly to the order line item."
1:35 - 2:00 Out of Stock	1. Scroll to Crispy Buffalo Chicken Tenders.	"Now, observe our programmatic inventory guardrail. The **Crispy Buffalo Chicken Tenders** are marked out-of-stock in our database.

TIME	MIKO'S SCREEN ACTION (WHAT TO CLICK)	CHRISTIAN'S SPOKEN LINES (WHAT TO SAY)
	2. Click the gray "Unavailable" button. 3. Show warning toast: "Item out of stock (0 available)".	When Miko tries to add them, the system rejects the request immediately with an on-screen warning toast. This prevents overselling and protects database transactional consistency."
2:00 - 2:25 AI Waiter FSM	1. Click "💬 AI Waiter" in top navigation bar. 2. Point to FSM State Badge: "STATE_TAKING_ORDER". 3. Click quick pill: "🥛 Check Dairy Allergen" or type inquiry. Show BistroBot reply.	"Switching to the **AI Waiter** tab, we meet BistroBot. Notice the finite state machine badge tracking our active conversation state. BistroBot parses customer intents, answers allergen inquiries, and recommends pairings in natural conversational Taglish, with all tool calls strictly validated before execution."
2:25 - 3:00 Checkout & KDS	1. Click "🍽️ Order Kiosk" -> "CONFIRM & PLACE ORDER". 2. Click "Simulate GCash Scan & Pay". Show digital receipt. 3. Click Split Bill "2x" (₱255/person). Close modal. 4. Click "👩‍🍳 Kitchen KDS". Show live order ticket ready.	"Finally, we complete checkout. Miko selects GCash payment. The system commits the ACID transaction, decrements inventory stock, and generates an official digital receipt. Students can even split the bill with one click. Closing the receipt and opening the **Kitchen Display System**, ticket number PB-1 appears live for the kitchen staff to prepare. That concludes our Milestone 2 walkthrough. Thank you, Sir Rob!"

Rehearsal Tip for Christian & Miko: Keep your speaking pace steady at ~130 words per minute. Miko can keep this PDF open on a second monitor or tablet while navigating Chrome on the primary laptop. This achieves the exact 3-minute mark required by the rubric without awkward pauses.
